EDUCATION

Purdue School of Engineering and Technology, IUPUI - Bachelor's of Science, **Electrical Engineering**, Minor in Mathematics - GPA: 3.72 - Graduated in May 2020.

Codecademy.com - Coursework in HTML, CSS, JavaScript, Java, Python, React Native, Swift, Kotlin, SQL

EXPERIENCE

VI Sports

- Software Engineer | 10/2024 - Present

- Contractor, Lucid Services Group - Mobile Software Engineer | 06/2024 - 10/2024

- Developed **cross-platform video composition features using Kotlin Multiplatform, Swift, AVFoundation, and FFmpeg** supporting both iOS and Android, resulting in improved performance in playback and stitching.
- Developed **camera capture experiences using Swift, UIKit, Objective-C, AVFoundation, and CoreGraphics**, packaged as a **Flutter Native Plugin** deployed via Codemagic, creating efficiency improvements in core features and CICD workflows.
- **Integrated hardware and software systems** by connecting a new pressure mat device to the mobile experience via a **custom C library**, generating heat map visuals and provided real-time biomechanical balance feedback to the user.
- **Authored comprehensive technical documentation** covering system architecture, data flow, and method call chains to ensure long-term maintainability, enabling rapid onboarding across proficiencies.
- **Led cross-functional discussions** and drove major software refactors to implement new features, improve code architecture, and improve performance by streamlining integrations, ultimately resulting in faster feature deployment.
- **Drove major software overhauls** to utilize native technologies thus greatly improve codebase efficiency and maintainability.

Sweetwater Sound

- Software Engineer, Mobile & Desktop Applications, 4D Relational Databases | 04/2022 - 04/2024

- **Transformed Sweetwater Sound's mobile applications into world-class storefronts** and utilities by designing brand new codebase architecture and UI. Built two native applications from scratch to replace an abysmal Flutter application. **Significantly improved discovery-to-sales** conversion rates and user satisfaction, ultimately overtaking their website in sales.
- **Mentored senior employees** in macOS application development with **Swift and SwiftUI**.
- Expanded proficiencies in Swift, SwiftUI, Kotlin, Jetpack Compose, SQL, relational databases, unit testing, CICD, Kanban, and lean development techniques, alongside exposure to many other technologies.
- **Deployed iOS and Android applications** to their respective stores to increase rate of value delivery.
- Led design and development of major software projects and user features, managing all phases from initial concept through delivery and launch communication, ultimately releases numerous internal and external improvements.
- Presented project achievements and future goals to large department groups resulting in broadened understanding and utilization.
- Focused on strengthening **emotional intelligence** competency and communication skills while in a diverse team to improve approachability, minimize misunderstandings, and accelerate software development efforts

Raytheon Technologies - Intelligence & Space Division

- Electrical Engineer | 06/2020 - 04/2022

- Architected software solutions in MATLAB and Python for **automated radar excitement and feedback analysis tests, hardware control automation**, speeding up critical development of defense projects.

STATEMENT OF EXCELLENCE

I am an **innovative, adaptable, and results-driven software engineer** with a record of turning complex requirements into **high-impact, production-ready solutions**. Through my LLC, Molargik Software, I also design and ship **native iOS apps that integrate Apple's latest frameworks** and deliver exceptional user experiences. I excel at **rapidly bringing major features to market** — from cross-platform video composition systems to real-time hardware-software integrations - using **Swift, SwiftUI, Kotlin, and other technologies**, supported by strong CI/CD pipelines and clean architecture. At Sweetwater, I **led the complete revitalization of their mobile apps**, replacing a legacy Flutter codebase with fully native applications. I have a record of being **highly-adaptable** and learning new technologies quickly to take on diverse challenges across platforms and domains. **The outcome: higher performance, faster feature delivery, improved maintainability, and increased user engagement.** I thrive at the intersection of engineering and UX - mentoring teams, leading refactors, and delivering solutions that modernize codebases and accelerate time-to-market.
